

As an advanced tool for query and analysis ReportControl is certainly a highly valued member of the GroundStar family. Based on either the RealTimeControl Live database or a statistics database the reporting tool enables the user to create and easily read reports. The reports can be created as tables and graphics and easily distributed per email or through a Web-based interface. The information can also be put on the company's Intranet so that every employee across the business can benefit from the insightful analyses and reports. As graphical user interface INFORM has developed a dashboard, which makes it easy for the end-user to limit his query by given criteria. The results are displayed online on the screen.

"With GroundStar's reporting tool a safe exchange of business information across the company can be guaranteed through the

ability of securing the content to different users," states Gabi Barmann Product Manager INFORM.

Fraport LS (Aviation Security) has been using the new version of ReportControl since the beginning of the year. "I am impressed with how easy it is to use INFORM's reporting tool. The implementation was uncomplicated and the cost of development has been low," says Mr Volker Reith, Manager Information Technology of Fraport LS.

Within the GroundStar product suite there are three options for ReportControl: Reports Basic, Reports Business and Reports Professional. The reporting tool can easily be adapted to the different needs of any company. Sara Snabb
